## ENHANCED MERCHANT ACTIVITY FILE

### ENHANCED MERCHANT ACTIVITY FILE (eMAF) OVERVIEW

The Enhanced Merchant Activity File (eMAF) is a data file provided on a daily basis to support a merchant's back-office functions, including settlement reconciliation, interchange qualification review, general ledger posting and comparison, custom report development, audit review, and related tasks. While the primary source of information in the Enhanced Merchant Activity File is individual transaction detail records, an increasing number of retailers now request summary-level data due to the increased processing required to summarize a large file to generate summary totals, so both detail and summary can be provided in the Enhanced Merchant Activity File.

Information that is provided in the Enhanced Merchant Activity File will vary depending on the reporting requirements of the client. Information is provided by:

- 1) Payment Type (e.g. Credit, Debit, EBT, Gift Card, POS Check, or WIC)
- 2) Report Level (authorization, detail or summary)
- 3) Record Type (mandatory records and optional records).

A Merchant Activity File Definition Table tracks what Payment Type, Report Levels, and Record Types are provided to the client. This file determines what information is provided to the client in the Enhanced Merchant Activity File.

The Enhanced Merchant Activity File is available through a number of electronic file delivery interfaces, including standard host file transmission options, including FTP and Connect: Direct, and through the Direct Workstation. The Enhanced Merchant Activity File is generated once per day following the end-of-day processing procedures required to clear and settle our client's network transactions and queued for transmission to the client. The file is produced in accordance with our standard processing schedules for bankcard processing. The availability of MAF files requires the timely delivery of deposited transactions to our system, and if transaction information is not delivered within the required deposit cutoff time frames, the MAF file will not be generated until the subsequent business processing date. Given timely receipt of transaction information and normal processing, the Enhanced Merchant Activity File should be available by 8am each day.

For customers concerned with increased data security, the Enhanced Merchant Activity File has the option for the truncation of customer cardholder numbers (for Credit, Debit, EBT, Gift Card, WIC) and customer checking account information (for POS Check). If a merchant chooses to be set up with the Truncated version of the Enhanced Merchant Activity File, the following truncation formats will be applied to the customer's cardholder data or checking account information:

#### For Credit, Debit, EBT, Gift Card and WIC:

- If the card length is 15 or 16 digits, then show the first 6 digits and then the last four digits
- If the card length is greater than 16 digits, then show the first 8 digits and then the last four digits.
- If the card length is less than 15 digits, then show the first 3 digits and then the last four digits.

#### For POS Check and General Check Services:

- Regardless of the length of the customer's DDA, show the last 4 digits of the DDA
- The customer's R/T will never be truncated so that the merchant can correctly identify their customer's Financial Institution should they need to contact them to resolve a customer issue or dispute.

Note: This truncation feature is an option by default, the Enhanced Merchant Activity File WILL NOT be set up with this truncation or masking feature. This special functionality can be turned on at any time for a merchant via this special request. However, a merchant can only receive one format of eMAF (either truncated or non-truncated). IT can switch a merchant from non-truncated to truncated at any time. However, IT will not be able to re-create any previous day(s) files in the truncated format. The truncation or masking feature would simply apply to any new files once the feature has been turned on. The same would apply to a merchant that was switching from truncated to un-truncated as well.

## ENHANCED MERCHANT ACTIVITY FILE (eMAF) STRUCTURAL ORGANIZATION

1. An Enhanced Merchant Activity File (eMAF) has a single delivery destination (receiving organization). The file will consist of separate files for each primary payment piece -credit, debit, gift card, etc. These files will be strung together in a single transmission.
2. Each file (credit, debit, gift, etc.) will contain one File Header and one File trailer record. There will be more than one set of Header/Trailer Records in a file transmission.
3. An eMAF can contain multiple types of processing activity, including Authorization (Pre-Settlement Information), and Settlement- Information. Header and Trailer Records will be used to separate each type of processing activity for each payment type - for example Credit Card Authorization Header and Trailer Records, Debit POS and EBT Reconciliation Detail Header and Trailer Records, and Gift Card Reconciliation Summary Header and Trailer Records could all appear in a single eMAF.
4. An eMAF can contain Reconciliation Information at the 1) Detail Level (each transaction), 2) Summary, or 3) Both the Detail and Summary Level. The Detail and Summary Reconciliation Level records will be separated by an individual Header and Trailer Records for each Payment Type.
5. The eMAF supports mandatory records and optional records. Mandatory and Optional Record requirements are identified within each record specification. A setup table will be required to define which records are provided to a client. Optional records cannot be provided unless the Mandatory Record is also provided.
6. All reporting for a specific Merchant Account Number (also known as a MID) will be provided within Merchant Account Number / Batch Header and Trailer Records.
7. If a client is receiving multiple types of reporting information in an eMAF file, the organization of the reporting information in the eMAF File will be:
  - A. Authorization Detail Records
  - B. Reconciliation Detail Records
  - C. Reconciliation Summary Records
8. A Merchant Activity File can contain no more than 999,999,999 records regardless of record type. The number of transactions that can be included in the file will depend on the types of records, payment types and other information requested by the client. An eMAF can routinely exceed 1 million or more transactions for a single chain code.
9. The Enhanced Merchant Activity File uses a fixed length format for all records and reporting information. Information is formatted for each field per the file specifications. Initial implementation will use a 200-byte format with the ability to lengthen records as required for future data reporting requirements.
10. Header and Trailer records for a Merchant Account Number will be generated **ONLY** if activity has occurred. Blank / Zero Dollar amount records will not be provided and **you must have activity in order to receive a record.**
11. If a merchant has multiple chains and would like one physical file with all of their work sent in that single file, this can be accommodated for by concatenating the multiple file into one. An eMAF will be generated for each chain and then the file will be concatenated into one physical file feed that can be sent to the merchant. The file will have multiple file headers and trailers for each product, one for each chain that is in the list. An example is below.

Chain A Credit Header  
 Chain A Debit Header  
 Chain A EBT Header  
 Chain B Credit Header  
 Chain B Debit Header  
 Chain B Gift Header

***Some records and/or fields within specific records are under development and are so identified within this source document***

## ENHANCED MERCHANT ACTIVITY FILE (eMAF) REPORTING INFORMATION AVAILABILITY

The Merchant Activity File will, upon full implementation, provide authorization and settlement information for all card payments supported by our system. Current file processing requirements for the Enhanced Merchant Activity File implementation allows for the following eMAF reporting information

### A. Authorization Level Information

#### 1. Detail Information

Authorization Detail records are separated by Payment Type and within each Payment Type by Merchant Account Number. They will include approvals, declines, and pre-authorizations as appropriate to product type.

- **Credit:** Visa, MasterCard, American Express, Discover Network (including JCB and CUP), Private Label, Fleet Cards (Voyager, Wright Express, Fleet One and FleetCor), Others
- **Debit:** Regional and National Debit POS Networks
- **EBT:** Regional (State) and National EBT Networks
- **Gift Card:** Premier Issue Gift Card, Foreign Gift Card (SVS)
- **POS Check Services**
- **WIC:** Women, Infants and Children Program

### B. Reconciliation - Detail Level Information

Reconciliation Detail records are separated by Payment Type and within each Payment Type by Batch / Merchant Account Number.

- **Credit:** Visa, MasterCard, American Express, Discover Network (including JCB and CUP), Private Label, Fleet Cards (Voyager, Wright Express)
- **Debit:** Regional and National Debit POS Networks
- **EBT:** Regional (State) and National EBT Networks
- **Gift Card:** Premier Issue Gift Card, Foreign Gift Card (Basic Information)
- **POS Check Services**
- **WIC:** Women, Infants and Children Program

### C. Reconciliation - Summary Level Information

Reconciliation Summary records are separated by Payment Type and within each Payment type by summary records at the Merchant Account Number, Division, and Chain Level. Optional Summary Level Records are available to provide additional information for specific Payment Types, such as Network Summary Records for Debit POS transactions and Transaction Type for Gift Card transactions.

- **Credit:** Visa, MasterCard, American Express, Discover Network (including JCB and CUP), Private Label, Fleet Cards (Voyager, Wright Express)  
\*Records for Each Card Networks within Credit Reconciliation Section
- **Debit:** Regional and National Debit POS Network Activity  
\*Optional Records for Summaries by Network
- **EBT:** Regional (State) and National EBT Networks
- **Gift Card:** Premier Issue Gift Card  
\*Summaries by transaction type
- **POS Check Services**
- **WIC:** Women, Infants and Children Program

## ENHANCED MERCHANT ACTIVITY FILE (eMAF) REPORTING RECORD OVERVIEW

The Enhanced Merchant Activity File includes the following types of reporting records:

- **File Header and File Trailer Record**  
One Set of Header and Trailer Records Per Payment Type (Credit, Debit, etc.)  
File Header and File Trailer Records Will Be Combined In Single Transmission
- **Merchant Account Number (MID) Header and Trailer Records**  
One Set of Header and Trailer Records Will Appear For Each Merchant Account Number  
A Set of Header and Trailer Records Will Appear Within Each Payment Type for Each Type of MAF Reporting Level (Authorization, Settlement Detail and Settlement Summary)
- **Authorization Detail Transaction Records – Mandatory Records**  
Mandatory Authorization Detail Records Provided For All Approved or Denied Transactions  
Each Authorization May Require More Than One Mandatory Authorization Detail Record
- **Authorization Detail Transaction Records – Optional Records**  
Mandatory Authorization Detail Records Provided For All Approved or Denied Transactions  
Each Authorization May Require More Than One Optional Authorization Detail Record.
- **Reconciliation Detail Level Records – Mandatory Records**  
Mandatory Reconciliation Detail Level Records Provided For Settled Transactions  
Each Settled Transaction May Require More Than One Mandatory Reconciliation Detail Record
- **Reconciliation Detail Level Records – Optional Records**  
Optional Reconciliation Detail Level Records Provided For Settled Transactions  
Each Settled Transaction May Require More Than One Optional Reconciliation Detail Record
- **Reconciliation Summary Level Payment Type Header and Trailer Records**  
One Set of Reconciliation Summary Level Payment Type Header and Trailer Record For Each Payment Type (Credit, Debit, Gift Card, etc.)
- **Reconciliation Summary Level Records – Mandatory Records**  
Mandatory Reconciliation Summary Level Records Provided For Settled Transactions  
More than one Mandatory Record may be required.
- **Reconciliation Summary Level Records – Optional Records**  
Optional Reconciliation Summary Level Records Provided For Settled Transactions  
More than one Mandatory Record may be required.
- **Adjustment Detail Transaction Records – Mandatory Records**  
Mandatory Adjustment Detail Records Provided For Financial adjustments

### Note:

**A Mandatory Record is a record that must be included in the file if the client elects to receive a particular type of processing activity (e.g. Authorization Detail, Reconciliation Detail etc.).**

**Optional records can only be provided if the mandatory records are received. For example, an Optional Reconciliation Detail Record can only be provided if the Mandatory Reconciliation Detail Record(s) is also received.**

# MERCHANT ACCOUNT NUMBER (MID) /BATCH HEADER RECORD 1

**Record Type:** 070  
**Requirements:** Mandatory  
 One record is included for every Merchant Account Number (MID) included in the Merchant Activity File. These records can repeat in different sections of the MAF. For example, a MID Header Record for the same Merchant Account Number could appear in the Authorization Detail Section under payment types Credit, Debit, EBT, Gift Card, POS Check and WIC and under the Reconciliation Detail Section under the same payment types. MID Header Record is matched to a MID Trailer Record

**Record Content:**

**Control Section Information**

Start	Length In Bytes	Data Type	Description
001	9	Numeric	Record Sequence Number
010	3	Character	Record Type Identifier '070' – MID Header Record #1
013	3	Character	Record Length = '200'

**Reporting Section Information**

Start	Length In Bytes	Data Type	Description
016	2	Character	Batch Settlement Type. Eligible Values Include: '01' – Credit Authorization '02' – Credit Detail '03' – Credit Adjustment '21' – Debit Authorization '22' – Debit Detail '23' – Debit Adjustment '31' – EBT Authorization '32' – EBT Detail '33' – EBT Adjustment '41' – Gift Card Authorization '42' – Gift Card Detail '51' – POS Check Authorization '52' – POS Check Detail '61' – WIC Authorization '62' – WIC Detail '63' – WIC Adjustment
018	16	Character	Merchant Account Number (Settlement MID) This MID must match the MID in the Merchant Account Number Header Record that is paired with the Trailer Record. Left Justified, Blank/Space Filled Example: '4445123456789 ' (3 Trailing Spaces) '4445456789012345' (No Trailing Spaces)
034	16	Character	Front End Merchant Account Number (Front End MID) Clients providing an alternate Front End MID (10 to 16 digits) will have an entry in this field representing the Front End that is associated with the Settlement MID. If an alternate account number is not provided, this field will be space filled. Eligible Values: Numeric, Left Justified, Blank/Space Filled Examples: '5436859900123456' (No Trailing Spaces) '09087654 ' (8 Trailing Spaces)
050	3	Character	Merchant Division Number (000-999) Blank/Spaced Filled
053	9	Numeric	Merchant Store Number Right justified, zero filled; Example: '000054321'
062	25	Character	Merchant Name (MDF Descriptor)
087	3	Character	Merchant Location Country Code Eligible Values: '840' = United States; '124' = Canada
090	6	Numeric	Batch Number File Identifier Must be unique and sequential within file. Every batch file will have a unique Batch Number Identifier. First Batch Record in every MAF file will be '000001' and will reset with every file
096	105	Character	Reserved – Future Use – Blank/Space Filled
<b>Total</b>	200		

# MERCHANT ACCOUNT NUMBER (MID) /BATCH HEADER RECORD 2

**Record Type:** 071  
**Requirements:** Optional MID Header Record  
 Merchant Location Information Record  
**Record Content:**
